VOXA / FICTIONAL EXAMPLE

Practice review

Practice pattern and app responses

17 Oct 2026, 00:00 - 23 Oct 2026, 15:00 / Africa/Cairo

Includes today to export time; the prior period uses the same local-time cutoff.

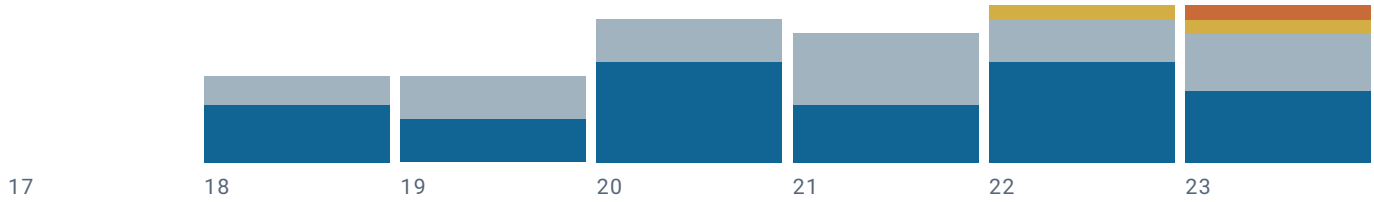

6/7
Days with speech attempts

30/50
App-matched attempts

+8.3 pp
Change on comparable targets

A match means the app accepted the target or an alias. It is not clinical pronunciation accuracy. Engine failures and no-speech captures are excluded from the match rate.

Practice across the days

Blue: app match | Grey: not matched | Yellow: no speech | Orange: technical issue

Practice targets and language

Target / language	This period	Previous period	Change
Water / AR	16/24	12/24	16.7 pp
Milk / AR	6/12	8/12	-16.7 pp
Bread / EN	6/8	4/8	25.0 pp
Personal target 1 / AR	2/6	0/0	--

Comparison requires 5 usable attempts on 2 days per period for the same target and language, with equal weight per target. Further targets appear in the appendix when needed.

How much evidence is available?

Comparison includes 3 targets, with 44 current and 44 previous trials. The change describes app responses only.

VOXA / FICTIONAL EXAMPLE

Tasks and follow-through

Separate child activity from caregiver review

17 Oct 2026, 00:00 - 23 Oct 2026, 15:00 / Africa/Cairo

Includes today to export time; the prior period uses the same local-time cutoff.

3/5
New tasks confirmed

5
Tasks reported done

1
Awaiting caregiver review

5 tasks were assigned in this period; 3 of those are confirmed so far. There were 4 caregiver confirmations in total, which may include older tasks. 1 tasks were marked unable.

Help at completion, as reported by the caregiver

Independent	With prompting	With direct help	Not recorded
1	1	1	1

Help was described for 3 of 4 confirmations. Independence is never inferred from tapping Done.

Caregiver review process

Oldest known wait: 3.0 hours. Timing is known for 1 of 1 tasks awaiting review.

Median time from submission to confirmation: 23.0 hours across 4 tasks. This measures the review process, not the child's ability.

Bring these questions to the next review

- Review Personal target 1 (ar): 2/6 app matches. Discuss the target, practice setting, and recognizer together.
- There were 1 technical issues and 2 no-speech captures. Check capture conditions before interpreting results.
- Review the 1 submitted tasks; review delays are not child failures.
- Record help levels on future confirmations so independence can be discussed with evidence.

Coverage and privacy

Structured tracking started 01 Oct 2026, 13:00. 3 older scored entries in this period are excluded from match rates and comparisons because they may contain successes only. Current task snapshot: 0 pending, 1 submitted, 1 unable. This snapshot is not a weekly completion rate.

No names, recordings, transcripts, or private notes. Personal targets use pseudonymous numbers. Sharing is caregiver-controlled. This report does not measure speech clarity, disorder severity, or treatment outcome.
